

To whom it concerns

Prad, 19.12.2023LB

CE CERTIFICATION / EN 15701 or DIN 4102 Norm

There is no correct or technically, **no CE standard at all for CLADDING** and JACKETING materials for pipes or HVAC internally defined.

According to TÜV, SGS and EFECTIS, there is no specific standard for this type of application, only insulating material is defined by the CE Norm, therefore it is not possible to say a priori which CE and FIRE class is approved or not; it would be the job of the person responsible for fire protection project to determine, depending on the project, whether the ISOLPAK®, ISOLPAK® CLAD or ISOLPAK® ALU cladding is an appropriate one for the combined application.

Our test certificates, TDS and MSDS are available at our www.isolpak.com homepage and through our distributor network.
